

To Whom It May Concern:

Sub 900 Mhz Spectrum would be the key for allowing true non line of sight broadband Internet access where current technology (2.4 or 5.x Ghz) fails due to trees, buildings etc.

We as a WISP appreciate the FCC's Bold and exciting new move for more spectrum in a sub 900Mhz allocation. We encourage the FCC to allow the spectrum to be used for WISP use.

We do not encourage the use of this spectrum to be used for general consumer goods to be used in the home. Including Residential wireless access points, Cordless phones, etc.

Sincerely,

Kent Andersen
